Work package number 7 : User single entry point to ESRF and ILL

tion

stantial increase in **the number of users and experiments is expected due to the implementation of the Upgrade Programme of the ESRF** and its neighbouring institute, the ILL.

ve

ective of this work package is to address **the feasibility of a single entry point for the User community to the ESRF and ILL facilities**.

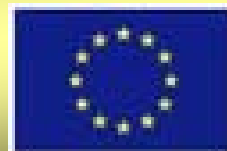

e entry point could help in **managing users, experiments, tracking results and publications** and could act as a foundation for a broader impact with an EU-wide user database.
